Subject: URGENT HUD CMS Developer Alert: TLS 1.0 No Longer Supported

HUD CMS Developers:

We have just learned that HUD has disabled TLS v1.0 in the ARM Pilot environment and plans to disable TLS 1.0 in production this weekend 8/8-8/9. Please verify that your CMS is able to connect to the ARM pilot environment as soon as possible and let me know if this impacts your CMS' ability to connect to the ARM service.

For the time being TLS v1.1 and TLS v1.2 will continue to be supported, however HUD plans to only support TLS v1.2 in the future. We will share additional information on that when it is made available to us.

Thank you,
Theresa
HUD HCS/ARM Support Team
