1.0 PURPOSE

1.0 PURPOSE

This Data Dictionary document is intended to be used as a reference tool for the Integrated Disbursement and Information System (IDIS). The format of the tables varies slightly from the HUD System Development Methodology's (SDM's) Data Dictionary template, but it conveys similar information.

One difference is that the columns that were not used—that is, were left blank or that were not applicable (N/A) to IDIS—are not shown in this document.

Another difference is that the HUD SDM Data Dictionary template requires only an alphabetical element listing. This Data Dictionary lists table names alone, and an element list by table, as well as by alphabetical listing. A PDF of the diagram model and the complete ERWin Data Model itself are also included.
